Equipment protection by flameproof enclosures "d".

Explanation of Ex marking and designation

Ex db IIC T4 Gb

Construction features

The flameproof constructions for Ex db IIB T4 Gb and Ex db IIC T4 Gb are available.

Enclosure (Degree of Protection) and cooling form

The degree of protection is:

- IP55/IP65 for Ex db IIB T4
- IP56/ IP66 for Ex db IIC T4.

The cooling form is IC411 as standard. IC416 is available as an option.

Insulation class

All motors are wound with Class F material, but calculated with temperature rise according to class B.

As option we can offer class H insulation material.

Materials

The stator windings are wound with polyester enamel round wire of high strength and then treated with the process of vacuum-pressure impregnation (VPI), to make them become a solid integral. Therefore, the winding insulation is excellent in electrical and mechanical properties, moisture resistance and thermal stability.

The rotors are of cast-aluminum and dynamically balanced to make the motor operate smoothly with small vibration and low noise.

The stator and rotor cores are laminated with high-class electrical steel sheet with high permeability and low loss, thus makes the motors possess low loss and high efficiency.

Bearings

The motors are fitted with low vibration and low noise bearings special for motors.

For motors of frame size 132 and below use bilaterally shielded ball bearings. At the driving ends corrugated spring washers are pressed on bearings with proper pressure, to restrain effectively the vibration and noise produced during motors' operation.

Motors of frame size 160 and above use bearings with inner and outer covers. Retaining rings at bearing position are equipped on shafts to prevent the rotor efficiently from moving axially. These bearings are re-greasable. See the BEVI 3DX manual for information on regreasing interval.

For safe and reliable operation the bearings on the motors of frame size 160 and above are provided with grease nipples. These are used to drain or replenish the lubricating grease without stopping the motors.

Fans and fan covers

For motors of frame size 80–280 and below, the fans are made of non sparking thermoelectrical material.

Motors of frame size 315–355 and above are fitted with cast-aluminum or steel-plate-welded fans of lightweight and high strength.

For the whole motor series, the fans are fixed with a key on the shaft and fastening on the end of the shaft to make the motor operation safe and reliable.

The fan cover is made of steel. On a prerequisite of preventing from the ingress of solid substances of certain size, they enable the motors to get maximum area of ventilation in order to form adequate currents.

Service conditions

Electrical conditions
